

We make it easy.

Make it work and make it easy was the simple philosophy of Artograph’s founders. In 1947 their vision and perseverance yielded the first Artograph art projector fabricated from assorted automobile and garage door parts, plywood, an old lens and bellows – all junk shop finds.

A creative imagination spurred a product line truly outside the box – art projectors, light boxes, spray booths, and eventually, Open Studio furniture. Each uniquely-designed product is backed by a long-standing reputation of high quality workmanship. Regardless of your level of expertise or experience, we have a wide range of products to best fit your needs. We make it easy for you.
